SUMMARY

Third-year Computer Science student building internal automation software in production at a live startup: custom front-ends and back-end services that automate real business processes end to end. Full-stack across TypeScript/JavaScript, Node.js, and Python, with hands-on experience in API development (RESTful services), SQL-backed systems, cloud infrastructure (AWS), and desktop application development (Electron). Comfortable translating operational workflows into working software, integrating third-party systems, and writing clean, tested, well-documented code. Fluent English communicator; co-author of two peer-reviewed papers.

EDUCATION

Dayananda Sagar University

B.Tech in Computer Science and Engineering (Cybersecurity Specialization)

Bangalore, India

2024 – 2028

- Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Computer Networks, Software Engineering

EXPERIENCE

SDE Intern

HireDue

Sep 2026 – Present

Remote

- Build and maintain internal automation software in TypeScript, Node.js, and Electron – custom front-end and back-end services that automate business workflows end to end, from job discovery through application submission.
- Develop and integrate RESTful APIs and third-party system integrations (job platforms, ATS systems) into the core automation engine.
- Work with AWS (Lambda, S3, RDS/PostgreSQL) for backend and cloud infrastructure components, and contribute to sync mechanisms between cloud and local systems.
- Write clean, modular, documented code and contribute to debugging and release readiness alongside the founding engineering team.

Operations Manager

Entrepreneurship Cell, DSU (DERBI / AIC-DSU)

Oct 2024 – Jan 2026

Bangalore, India

- Coordinated cross-functional teams and multiple stakeholders across two startup incubators, translating operational needs into tracked deliverables and clear communication.

PROJECTS

Public Grievance Tracker | React, Django REST Framework, MySQL

GitHub

- Independently designed and built a full-stack internal-tool-style application end to end: custom React front end, RESTful API backend, SQL-backed data model.
- Found and fixed an authorization bug on unauthenticated write endpoints, then wrote a 25-test suite with CI (GitHub Actions) for release confidence.

Fraud Detection System | Django REST Framework, PostgreSQL, scikit-learn

GitHub

- Built and shipped a RESTful API over PostgreSQL serving a trained ML model, with authentication, rate limiting, and OpenAPI documentation for consumers.

TECHNICAL SKILLS

Languages:

TypeScript, JavaScript, Python, SQL, C++, Bash

Web & API Development:

RESTful APIs, Node.js, React, Django REST Framework, API integration

Systems & Cloud:

AWS (Lambda, S3, RDS), Electron, Linux, Docker

Data:

SQL, PostgreSQL, MySQL

Practices:

Git, CI/CD (GitHub Actions), automated testing, technical documentation
